

AI Extension_Code Generation

The screenshot displays the Testleaf CRM/SFA interface. The top navigation bar includes links for CRM/SFA, Docs Wiki, eCommerce, and a user profile for 'demosalesmanager'. The main menu on the left lists various modules like My Home, Leads, Contacts, Accounts, Cases, Activities, Opportunities, Quotes, Orders, Forecasts, Marketing, Partners, Teams, and Reports. The 'Leads' module is currently active, showing a 'Find Leads' form with fields for Name and ID, Phone, Email, and Advanced search. Below the form is a 'Lead List' table with columns for Lead ID, First name, Last name, Company Name, City, and State. The AI Code Generator sidebar on the right is open, showing settings for Language (Python), Framework (Playwright), Select LLM Provider (Groq), Select Model (openai/gpt-oss-120b), and Groq API Key.

Code is generated and Attached in text file

The screenshot displays the Testleaf CRM/SFA interface, similar to the previous one. The AI Code Generator sidebar on the right is open, showing the generated code for the 'Find Leads' form. The code includes a feature description and a scenario for finding leads by ID, name, and company name. The generated code is as follows:

```
Feature: Lead Search Form
As a sales representative
I want to search for leads by enteri
So that I can find matching records

Scenario: Find leads by ID, name, an
Given I am on the lead search page
When I fill in the lead details
| field | value |
| Lead ID | 12345 |
| First name | John |
| Last name | Doe |
| Company Name | Acme Corp |
And I click the Find Leads button
Then the Find Leads button should
```
